TFGN II Series

Multi-head Automatic Embroidery Machine

Factory option	Automatic lubrication system, Bobbin Changer II, Smart Bobbin Changer, Auto Frame Changer, Sequin Device IV, Sequin Device III Twin Type, Position Marker	Power	3-phase : 200/220/240/380/400/415/440V, 50Hz/60Hz Single-phase : 200/220/230/240V, 50Hz/60Hz
Option	High-speed Cording Device, Boring Device II, Emb. Lame Attachment	Speed	Max. 1,100 rpm
		Power Consumption	1.8 kw

※The Ball screw drive system is applicable to the TFGN II Series with a total machine length of more than 5,755mm (5,845mm for cross type Z-spec. drive system)
 ※Consultation for orders of special embroidery machines is also available by specifying embroidery space, number of heads, number of needles etc.
 ※No design or registered trademark of the products contained in this catalogue may be used without prior permission.
 ※Rotational speed may vary, depending on the applicable conditions, machine models or frame types.

Factory option

Auto Frame Changer
An automatic frame changing device for continuous fabric embroidery

Sequin Device IV
A device for embroidering various sequins: small-diameter sequins, large-diameter sequins, irregular-shape sequins and eccentric sequins

Sequin Device III [Twin Type] <PAT>
A device for embroidering 2 different sequins by freely switching them at high revolving speed

Smart Bobbin Changer
It takes the SBC only 6 seconds to replace the bobbins for all heads. Raising production efficiency to a great extent!!

High-end model making the most use of TAJIMA's technologies

High-grade machine having extended functionality and superior performance

○ The specifications and designs of our products are subject to change without notice for performance improvement.

Multi-head Automatic Embroidery Machines

TFGN II

Series

High-end model making the most use of TAJIMA's technologies

The TFGN Series, TAJIMA's flagship model, has just been renewed.

See for yourself, the high productivity and higher added value that Tajima embroidery machines provide.

Features

High Work Efficiency

The newly designed middle thread guide<PAT.P> has halved the thread setting time for one needle compared with our conventional parts. You can set thread tension easily.

Value-added Product Making

※Thick thread is applicable to the needle sizes of #16 and more, which are only available by DB K5-Z3 (TAJIMA exclusive needle).
※Thick thread replacing parts kit is available on option.

Since needle sizes from #9 to #18 can be used, the applicable thread variety from thin thread to thick thread has expanded dramatically. When the Thick thread replacing parts kit attachable/detachable by one-touch operation is used, thick thread embroidery can be done easily. Furthermore, when some refinements are added to the design data, more unique, higher value-added products can be produced.

Stable stitching

In order to keep up stable quality, thread condition should be adjusted according to thread type, fabric and design. The tension and stroke of the thread take-up spring, which have been adjusted for each head, can now be adjusted for each needle bar. Since the adjustment can be made according to thread type and stitching method, product quality can be further enhanced.

Option

For Higher Productivity

Smart Bobbin Changer allows the bobbin threads of all heads to be replaced simultaneously. The automatic bobbin thread replacement has substantially saved time, improving production efficiency to a great extent, and drastically decreases the work burden on each operator.
